Office Action Summary

Art Unit: 1761

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a kit for stuffing food, classified in class 99, subclass 450.8.
- II. Claim 2, drawn to a method of stuffing food, classified in class 426, subclass 281.

The inventions are distinct, each from the other because:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed in Group I can be used in methods other than that recited in Group II. For example, the product of Group I could be used in a method wherein the aperture is not cut in a food to be stuffed but instead is created by molding the food to be stuffed. Also, the product as claimed in Group I can be used in methods other than stuffing. The product of Group I can be used in a molding process wherein food is placed around the rods to form a cored food and the sheets could be used to wrap the food to retain the food on the rods or used as a wrapper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art requiring separate searches as shown by their difference classification, restriction for examination purposes as indicated is proper.
